/note="vector: lambdaZapII; Site_1: Eco R I (5' end):
Site_2: Xho I (3' end): Brugia malayi is a lymphatic
filarial nematode parasite of humans. Full length cDN was
prepared by long-range RT-PCR from mRNA from L2 larvae of
the human filarial nematode parasite Brugia malayi using
nematode spliced leader (SL, 5'end) and oligo-d(T) (3'
end) primers. The library had an unamplified titre of -1 x
10E6 per ml and -95% of clones have inserts (mean length
900 bp). The library is available from The Filarial
Genome Project Resource Center: context Dr. S.A. Williams,
Clark Science Center, Smith College, Northampton, MA 01063

/otte-Total And Angeles (1) Site_1: Eco R I (5' end); Site_2: Xho I (3' end); Brugia malayi is a lymphatic filarial nematode parasite of humans. Full length cDNA was prepared by long-range RT-PCR from mRNA from L2 larvae of the human filarial nematode parasite Brugia malayi using nematode spliced leader (SL, 5'end) and oligo-d(T) (3' end) primers. The library had an unamplified titre of 1 x 10E6 per ml and -95% of clones have inserts (mean length -900 bp). The library is available from The Filarial Genome Project Resource Center: contact Dr. S.A. Williams, Clark Science Center, Smith College, Northampton, MA 01063 USA phone +1 413 585 3826 fax +1 413 585 3786 email

The microtubule binding domain of microtubule-associated protein
MAPIB contains a repeated sequence motif unrelated to that of MAP2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /translation="MATVVVEATEPEPSGSIGNPAASTSPSLSHRFLDSKFYLLVVVG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ETVTEEHLRRAIGNIELGIRSWDTNLIECNLDQELKLFVSRHSARFSPEVPGQKILH

ONA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis Claim 24; Page 76; 183pp; Japanese.
This sequence encodes full length osteoclastogenesis inhibitory factor (OCIF) 5. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducting conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.

Claim 1; Fig 1; 59pp; English.

Claim 1; Fig 1; 59pp; English.

Claim 1; Fig 1; 59pp; English.

The receptor binds to TNF, and in particular, TNF-beta.

The receptor may be used for screening for antagonists and agonists of the receptor and for liquads for the receptor. Such agonists may differentiation, to mediate the immune response and anti-viral response, to requiate growth and provide resistance to certain infections. The antagonists may be used therapeutically, to treat untofinned diseases, inflammation, septic shock, to inhibit graft-versus-host reactions, and to prevent apoptosis.

To be provided the control, esp. treatment of osteoporosis or claim 72; Agaper : 183pp; Japanese.

To bone resorption control, esp. treatment of osteoporosis or claim 72; Agaper : 183pp; Japanese.

This sequence encodes a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes OCIF-CCR4 in which amino acids 123-380 of the mature protein have been deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g. osteoporosis. This sequence is not given in the specification and is derived from the protein sequence and the wild type OCIF CNRA sequence given in 736685.

for bone resorption control, esp. treatment factor process.

Claim 84; Page 149-150; 183pp; Japanese.

Claim 84; Page 149-150; 183pp; Japanese.

This sequence encodes a mutated version of the full length
osteoclastogenesis inhibitory factor (OCIF) of the invention. This
sequence encodes OCIF-CBSp in which amino acids 167-380 of the mature
protein have been deleted. These amino acid changes have been caused
by the introduction of a restriction site. The OCIF of the invention
has a molecular weight by SDS-PAGE of 60 kD under reducing conditions
and 120 kD under non-reducing conditions. The protein is adsorbed onto
cation-exchangers or heparin and its activity is lowered after 10 mins
at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 50
deg.C. OCIF is useful in the control of bone resorption and therefore

Sequence encodes a mutated version of the full length

osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes OCIF-CDD1 in which amino acids 177-380 of the mature protein have been deleted. The OCIF of the invention and 120 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g. osteoporosis. This sequence is not given in the specification and is derived from the

DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim [6:, Page 145: 183pp; Japanese.

This sequence encodes a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes OCIF-CDD2 in which amino acids 252-380 of the mature protein have been deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kb under reducing conditions and 120 kb under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C. or 70 mins at 56 deg.C. and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g. osteoporosis.
                                                                                                 ö
protein sequence and the wild type OCIF cDNA sequence given in T36685. Sequence 594 BP; 176 A; 152 C; 136 G; 130 T;

DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis

Claim 81; Page 149; 183pp; Japanese.

Claim 81; Page 149; 183pp; Japanese.

Claim 81; Page 149; 183pp; Japanese.

This sequence encodes a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes OCIF-CSph in which maino acids 298-380 of the mature osteoclastogenesis inhibitory factor (OCIF) of the invention of a restriction site. The OCIF of the invention has a molecular weighth by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg. C. OCIF is useful in the control of bone resorption and therefore in the treatment and
                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61 caggaaacgtttcctccaaagtaccttcattatgacgaagaaacctctcatcagctgttg 120

DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 51, Page 141-142; 183pp; Japanese.

This sequence encodes a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes OCIF-DDD1 in which amino acids 178-252 of the mature protein have been deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C. or 30 mins at 56 deg.C. and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g. osteoporosis.

Division of the control, esp. treatment of osteoporosis claim of the mendaling osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 57; Page 142-143; 183pp; Japanese.

This sequence encodes a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes off-DDD2 in which amino acids 253-326 of the mature protein have been deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under on reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g. osteoporosis.

Claim 78; Age 148; 183pp; Japanese.

This sequence encodes a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes OCIF-CBst in which Gln371 is substituted with Leu and amino acid changes have been caused by the introduction of a restriction site. The OCIF of the invention has a molecular weight by SDS-PAGE of the whole treducing conditions and 120 Kb under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g. osteoporosis.

Dry Book of Steedlastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 60; Page 143-144; 183pp; Japanese.

This sequence encodes a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes OCIF-CL in which amino acids 379-380 of the mature protein have been deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C. or heparin and its activity is lowered after 10 mins at 70 deg.C. or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g. osteoporosis.
                                                       ö

Page 135-136; 183pp; Japanese.

This sequence encodes a mutaded version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes a mutade version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes OCIF-C22S in which the 22nd Cys residue in the mature OCIF protein is substituted by Ser. The OCIF of the invention has a molecular weight by SDS-PREF of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation—exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C. or 30 mins at 56 deg.C. and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore on the control of the control of bone resorption of e.g.

This sequence encodes the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. The OCIF has a molecular weight by SDS-PAGE of 60 kb under reducing conditions and 120 kb under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 10 mins at 56 deg.C. and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and the resorption, e.g.

The mRNA sources were 1) 7 day germinated etiolated seedlings; 2) tissue culture grown roots; 3) staged plants half with 24 hour light cycle, half on 16 hr light, 8 hour dark-rosettes; 4) same plants as 3 but aerial tissue (stems, flowers and siliques. The vector is BRL's lambda Zip-Lox. The cDNA inserts were directionally cloned with Sal-Not arms using oligo dr

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="Organ: mixed (see below); Vector: pT7T3D-Pac
(Pharmacia) with a modified polylinker; Site_1: Not I;
Site_2: Eco RI; Equal amounts of plasmid DNA from three
normalized libraries (melanocyte 2NbHW, pregnant uterus
NbHPU, and fetal heart NbHHJBW) were mixed and ss circles
were made in vitro. Following HAP purification, this DNA
was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified cDNAs from pools of
5,000 clones made from the same 3 libraries. The pools
consisted of I.M.A.G.E. clones 260232-265223,
340488-348479, and 484488-489479."
